## 1 NOTE

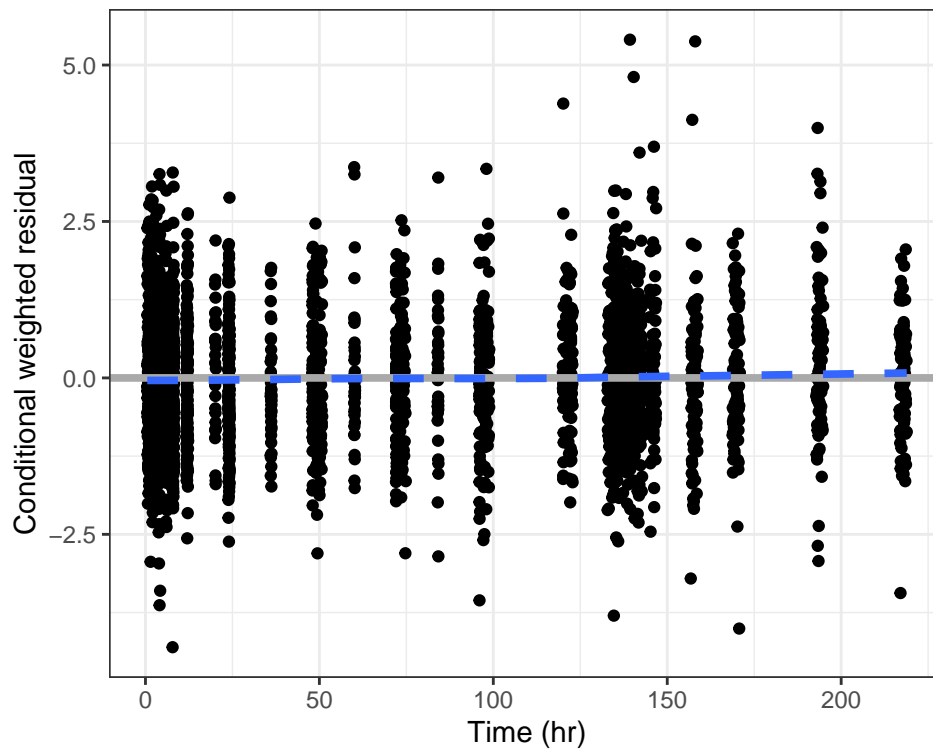

This notebook provides a technical record of results generated from an R script. Any final version of this script will have been QC'd to ensure the quality of the underlying R code, but the material has not been organized or curated for clarity of communication. For an organized and curated summary of these analyses, MetrumRG recommends a formal communication deliverable such as a full report, brief communication, or slide deck.

## 2 Load packages

```
library(tidyverse)
library(pmtables)
library(pmplots)
library(knitr)
opts_chunk$set(fig.align = "center")
```

### 3 Plots

```
data <- pmplots_data_obs()
cwres_time(data)
```

## 4 Table - tabular

```
data <- stdata()

stable(data, r_file = "mrg_notebook.Rmd", cols_bold = TRUE) %>%
  pt_wrap()
```
